

Gentle, Unhurried Cosmetic Treatments Highlight “The Farrell Experience”

Patients deserve to receive cosmetic treatments in a relaxed, comfortable atmosphere. That’s why Deborah M. Farrell, MD, of Farrell Laser and Cosmetic Medicine Center, Mechanicsburg, has created a welcoming space where men and women undergo rejuvenating treatments like Botox, Dysport, Restylane, Juvéderm, Active FX fractional laser resurfacing, tattoo removal, spider vein treatments, laser hair removal and skin pigmentation reduction.

“Many people come to me with preconceived notions of non-invasive cosmetic treatments,” explains Dr. Farrell. “Some have had bad experiences; others have simply been misinformed. That’s why I take a consultative approach, showing them the treatments that I believe will work best for their desired outcomes and budgets.”

This level of consideration, along with Dr. Farrell’s gentle, unhurried way of treating patients and attention to detail, has led appreciative patients to name the approach “The Farrell Experience”.

“The Farrell Experience” could be dubbed “old-fashioned” by some due to its focus on customized patient care for the men and women. However, it’s important to note that Dr. Farrell always incorporates the latest advances, equipment and techniques into her individualized service.

“Many extras are included in ‘The Farrell Experience’ at no added cost – topical creams, anesthetic options, cold air and Gentle Waves technology,” she says. “Taking the time to be sensitive to patients’ physical and emotional needs diminishes downtime and improves results. The technique is incredibly effective. People look and feel refreshed and natural; in fact, many patients tell me that their friends, family members and colleagues never guess that they’ve had a non-invasive cosmetic procedure. They just notice they look great.”

Concludes Dr. Farrell with a smile, “By giving personalized attention – the ‘Farrell Experience’ – I can take a little time off Mother Nature’s clock and give patients a boost of confidence.”
